                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Qy
The present sequence is the 98kDa putative outer membrane protein gene cc from Chlamydia pneumoniae. The genomic sequence was amplified using two CC PCR primers. The 5' primer contains a Noti restriction site, a ribosome binding site, an initiation codon and a sequence close to the 5' end of CC the 98kDa putative outer membrane protein coding sequence. The 5' primer CC contains the sequence encoding the C-terminal sequence of the putative outer membrane protein and a serging sequence. The 3' primer CC contains the sequence encoding the C-terminal sequence of the putative outer membrane protein and a BsrG1 restriction site. The stop codon was cc excluded and an additional nucleotide was inserted to obtain an in-frame CC terminal fusion with the Histidine tag. The PCR product was cloned to not a eukaryotic expression vector (pCA-Myc-His) by restricting both CC the vector and the PCR product with NotI and BamH1 and performing a Cliqation reaction. This expression vector was injected intramuscularly cand intramasally into mice, which were subsequently inoculated with CC chlamydia pneumoniae. The chlamydial lung titers of the immunised mice were lower than those of the controls. Thus the 98kDa putative outer membrane protein can be used as a vaccine to provide protection against Chlamydia infections, especially Chlamydia pneumoniae infections.

The polypeptide may also be administered orally to treat Chlamydia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               뮍

                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                      was obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see AAW06816-27) encoding C dmp4-Omp15 proteins (see AAW088417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: Omp12,11,10,5,4,13 and 14 in one cluster and Omp6,7,8,9 and 15 in the other, and encode polypeptides of about 89,6-100.3 kba and C about 56.1 kba. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines may also prevent atherosclerosis and bronchial asthma,

Mygind P;
This DNA sequence codes for the novel 96.7 kDa surface exposed protein Omp9 (see AAW88422) of the human respiratory pathogen Chlamydia pneumoniae. By generating antibodies against C. pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see AAX06816-27) encoding Omp4-Omp15 proteins (see AAW88417-28) in an expression library of
                                                                                                                                                                                                                                                                                                                                 Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific outer membrane proteins of C. pneumoniae or nucleic acids encoded to the content of the conte

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             pneumoniae. The test comprises detecting antibodies specilic ro omp4-omp15 or detecting nucleic acid fragments encoding these ou membrane proteins, especially by PCR. The proteins are also use in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma, according to the protein as DNA vaccines may also prevent atherosclerosis and bronchial asthma, according the protein as DNA vaccines may also prevent atherosclerosis and bronchial asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             C. pneumoniae DNA. The genes are situated in 2 gene clusters: omp12,11,10,5,4,13 and 14 in one cluster and omp6,7,8,9 and 15 in the other, and encode polypeptides of about 89.6-100.3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for omp4-omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used

                                                                                                                                                                                                                                                     AAZ61502-09 encode Chlamydia pneumoniae polypeptides. The polypeptides are present in the bacterial membrane structure, in the external vicinity of the membrane structure, in the inclusion membrane structure, in the external vicinity of the inclusion membrane structure, and in the cytoplasm of the infected cell. The polypeptides may be used to prevent, treat and detect the presence of Chlamydia infection and/or the presence of Chlamydia in a sample. The polypeptides may also be used to induce an immune response in a mammal. The vaccine vector comprising the polynucleotides is used to induce an immune response in a mammal. Antibodies directed against the polypeptides may also be used therapeutically to treat and/or prevent a Chlamydia infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel antigens and corresponding DNA molecules that can be used to prevent, treat and diagnose disease caused by Chlamydia infection in mammals, especially humans \boldsymbol{\cdot}

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence encodes a Chlamydia antigen of the invention, designated CPN100639. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        infections. Chlamydia is a pathogen implicated in the development of (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis, adult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids encoding preventing, diagnosing pneumonia, bronchitis,

By generating antibodies against C. pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see AAX06816-27) encoding Omp4-Ompl5 proteins (see AAW88417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: Omp12,11,10,5,4,13 and 14 in one cluster and Omp6,7,8,9 and 15 in
                                                                                                                                                                                                                                                                                                                                                                                                                                                 pneumoniae. The test comprises detecting antibodies specific for omp4-omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific for outer membrane proteins of C. pneumoniae or nucleic acids encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the other, and encode polypeptides of about 89.6-100.3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Omp11; outer membrane

This sequence encodes a Chlamydia antigen of the invention, designated CC CPNI06639. The nucleic acids (and their complementary sequences) may be cu used as diagnostic agents for detecting the presence of nucleic acids cand their complementary sequences) may be complementary sequences of nucleic acids conding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate cards may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The confictions. Chlamydia is a pathogen implicated in the development of infections. Chlamydia is a pathogen implicated in the development of confections. Chlamydia is a pathogen implicated in the development of confections community acquired pneumonia, upper respiratory tract disease (especially borochitis and sinusitis, asthmatic bronchitis, confections of asthma and acute exacerbations of asthma in adults. be may

                                                                                                                                          δÃ
                                                                                                                                                                                                                                                    This sequence encodes a Chlamydia antigen of the invention, designated CPN100634. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays, Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis, adult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                          Query Match

                                               This sequence encodes a Chlamydia antigen of the invention, designated CC CPN100534. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (FCR) assays. Antisense sequences may be used to down regulate nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of closes (especially bronchitts and sinusitis, asthmatic bronchitts, cadult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-DEC-1998;

                     The present sequence represents the complete genome of Chlamydia pneumoniae, and encodes proteins AAY34584735879. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.

```
CC hybridization-based assays or amplification-based assays. The protein may CC be used for diagnostic purposes, for their enzymatic or structural CC activity, or as a vaccine. The invention also describes (1) a probe CC comprising a hybridizing fragment of N1; (2) an isolated nucleic acid CC (N2) that hybridizes under stringent conditions to N1; (3) an expression CC cassette comprising N1 under the transcriptional regulation of a CC transcriptional initation region functional in an expression host, and a CC transcriptional itermination region; (4) a cell comprising an expression CC cassette of (3) as part of an extrachromosomal element or integrated into CC cassette into the host cell as a result of induction of the expression CC cassette into the host cell, and the cellular progeny of the host cell; (5) a method for producing a P1 comprising growing a cell of (4) where CC the protein; (6) a purified polypeptide composition comprising at least 50 weight % of P1; and (7) a monoclonal antibody binding specifically to the CC peptide of (6).

Ş В Qγ В Qy

This invention describes a novel nucleic acid (N1) encoding a Chl. pneumoniae protein (P1), given in the specification. The isolated acid is useful for diagnostic and analytical methods, such as,

Chlamydia nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC Priss DNA sequence codes for the novel 98.9 kDa surface exposed CC CP protein Omp4 (see AAW88417) of the human respiratory pathogen CC Chlamydia pneumoniae. By generating antibodies against C. CC pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) CC was obtained which reacted with outer membrane proteins. The CC antibody was used to identify the genes (see AAX06816-27) encoding CC Omp4-Omp15 proteins (see AAX88417-28) in an expression library of CC c. pneumoniae DNA. The genes are situated in 2 gene clusters: CC Omp12;11.10,5,4,13 and 14 in one cluster and Omp6,7.8,9 and 15 in CC the other, and encode polypeptides of about 89.6-100.3 kDa and CC about 56,1 kDa. The invention provides a new species specific test Cf or identifying mammals (including humans) infected with Chlamydia CC membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The complex cacids and proteins can also be used in the immunization of CC mammans, the nucleic acids being particularly useful as DNA CC vaccines for effecting in vivo expression of antigens. The CC which are possibly associated with C. pneumoniae.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
